

InterviewAce Context (Deployment) Diagram

High-level runtime deployment context with clean boundaries and traceable integrations

Deployment Notes

1. Job Seeker accesses InterviewAce via a browser over HTTPS.
2. Frontend is deployed on Vercel (Next.js). It serves the UI and calls API routes on the same domain.
3. Backend API handles authentication, questions, answers, scoring, coach chat, and history.
4. PostgreSQL (Vercel Postgres) stores persistent data accessed via SQLAlchemy ORM.
5. Scoring runtime uses sentence-transformers to compute similarity scores.
6. Ollama (local) provides AI coach responses.
7. Brevo SMTP sends password reset emails.
8. GitHub Actions runs CI (tests, lint, build) and deploys to Vercel.
